

## WE CLAIM:

1. A presentation system comprising:  
a writing surface coupled with a frame, the writing surface being adapted to receive erasable ink; and  
5 a printer coupled with the frame, the printer including a printhead configured to print an image on the writing surface with erasable ink.
- 10 2. The presentation system of claim 1 wherein the printhead is adapted to move along a traverse rail.
- 15 3. The presentation system of claim 2 wherein the traverse rail is adapted to traverse the writing surface.
4. The presentation system of claim 2 wherein the writing surface is adapted to move past the printhead.

5. The presentation system of claim 4 wherein the writing surface is a flexible sheet configured for selected passage past the printhead.

5 6. The presentation system of claim 4 further comprising a roller mechanism configured to engage the flexible sheet to pass the flexible sheet past the printhead.

10 7. The presentation system of claim 6 wherein the flexible sheet forms a continuous loop.

15 8. The presentation system of claim 6 wherein the rollers are motor-driven and adapted to rotate the rollers such that the writing surface is moved past the printhead.

20 9. The presentation system of claim 1 further including a scanner.

10. The presentation system of claim 9 wherein the scanner is adapted to scan the writing surface.

5 11. The presentation system of claim 10 including an attached second printer in communication with the scanner.

10 12. The presentation system of claim 1 further including an eraser adapted to erase the writing surface.

15 13. The presentation system of claim 12 wherein the eraser is adapted to traverse the writing surface.

14. The presentation system of claim 12 wherein the writing surface is adapted to move past the eraser.

15. The presentation system of claim 1 in combination with a processor having memory, the processor being in communication with the printer and adapted to provide an image to the printer to be printed on the writing surface.

5

16. The presentation system of claim 1 wherein the erasable ink is dry-erase ink.

10

17. The presentation system of claim 1 wherein the writing surface is 2' x 3' or larger.

15

18. A presentation system comprising:  
a presentation board adapted to display an image for simultaneous viewing by a plurality of viewers, the presentation board comprising:  
a writing surface; and  
a printer disposed to print onto the writing surface;  
an electronic image; and  
a processor adapted to transmit the electronic image to the printer.

22. The presentation system of claim 19 further including an eraser.

23. A method for creating an image to be viewed during a presentation comprising:

- obtaining, in electronic form, the image to be viewed;
- sending the image to a presentation system including a printer
- 5 with a printhead adapted to print onto a writing surface; and
- printing the image on the writing surface.

24. The method of claim 23 wherein the printer is adapted to  
10 print images in dry-erase ink.

25. The method of claim 23 further comprising, scanning an  
image on the writing surface, saving the scanned image in electronic form, and  
15 printing the scanned image on the writing surface at a later time.
